Behind these tiles, there are 2 distinct outcomes:

1. **Gems/Rewards:** These tiles increase your present profit multiplier.
2. **Mines:** Revealing a mine lead to the loss of your stake and an instant end to the round.

The basic appeal of the game lies in the "Cash Out" mechanic. Players can select to stop at any time after revealing a benefit, protecting their existing winnings. The longer a player continues to click tiles without hitting a mine, the greater the multiplier climbs-- but the analytical probability of hitting a mine increases with every successful choice.

Secret Game Variables

To master the game, gamers should understand how these variables influence the possible outcome:

- **Grid Size:** Some variations permit you to change the grid (e.g., 2x3, 3x6, 5x5). Smaller sized grids have less mines however lower benefits; larger grids offer huge multipliers however considerably higher danger.
- **Mine Count:** Players can often choose the number of mines are concealed on the grid. A greater mine count exponentially increases the multiplier for every gem found but makes the game significantly more unstable.
- **Bet Size:** The structure of your risk management.
