Instead, players are welcomed by a tidy interface featuring a target multiplier input box, a bet quantity selector, and a popular "Bet" button.

How a Standard Round Works:

3. **Chance:** The player initiates the round.
4. **The Outcome:** The game's random number generator (RNG) produces an outcome. If the generated multiplier is *equal to or higher* than the target, the gamer wins their bet multiplied by the target. If it fails, the stake is lost.

Understanding the Mechanics and House Edge

To the uninitiated, the enormous prospective payouts in Limbo can seem too great to be real. However, the game runs on rigorous mathematical possibilities. Every target multiplier has a matching win probability.

|Target Multiplier|Win Probability (Approx. with 1% House Edge) ||:-- |:--|| **1.01 x**|98.02% | **2.00 x**|49.50% | **5.00 x**|19.80% | **10.00 x**|9.90% | **50.00 x**|1.98% | **100.00 x**|0.99% | **1,000.00 x**|0.099%|
