How It Works

When a gamer clicks the "Play" button, a virtual chip is released from the top of a triangular pyramid filled with pegs. As the chip descends, it bounces off these pegs in a randomized, chaotic path until it lands in one of the slots at the bottom. Each slot is designated a specific multiplier. If the chip lands in a slot with a value greater than 1.0 x, the player wins; if it lands in a slot lower than 1.0 x, the player loses a portion of their stake.

Personalization Options
