Gamers obtain skins primarily by opening randomized loot boxes called "cases" utilizing paid secrets, or by receiving random drops after matches. Due to the fact that some skins are exceptionally unusual, a supply-and-demand market rapidly formed on the Steam Community Market.

Quickly, third-party websites [Browse around this site](#) recognized that these digital products held real-world financial worth. By using application programming user interfaces (APIs) provided by Steam, developers created platforms where gamers could deposit their virtual skins and utilize them as chips to play casino-style video games. Even with the transition from CSGO to CS2, this economy has remained mainly intact and increasingly active.
