The core goal is deceptively simple: **squander before the multiplier "crashes."**

If a gamer successfully cashes out at 2.50 x, they double their cash (minus a minor home edge). However, if the crash occurs before they hit the cash-out button, their entire stake for that round is lost. The crash can occur almost immediately at 1.00 x, or it can climb up into the thousands-- though high multipliers are exceedingly rare.

How a Standard Round Works

3. **The Decision:** Players watch the multiplier climb. They must choose when to strike the "Cash Out" button. Greed determines remaining in longer for a larger payment, while caution advises an early exit.
4. **The Crash:** At a completely random, algorithmically figured out minute, the game crashes.
5. **The Outcome:** Anyone who cashed out prior to the crash wins their bet increased by that exact cash-out rate. Anyone who stayed in loses.
