In a single, isolated round versus a really random opponent, the mathematical chances of winning, losing, or connecting are equivalent:

Outcome Likelihood (Random Play) Payout (Standard Even Money) **Win** 33.33% +100% (Double your bet) **Loss** 33.33% -100% (Lose your bet) **Tie** 33.33% Push (Money returned or re-play)

Because the odds of a tie are one in three, video game designers and competition organizers should establish clear guidelines for what happens when both gamers toss the exact same symbol.
