A CS2 casino is an online gambling place that utilizes **Counter-Strike 2 skins** (or related virtual items) as the primary currency. Rather of traditional cash, players deposit skins gathered from the game's market, then wager them on:

Game Type	Description	Typical Return-to-Player (RTP)
Skin Roulette	A spinning wheel with colour-coded slots; gamers bet a skin on red, black or green.	96-98%
Crash	A multiplier graph that climbs until it "crashes." Gamers squander before the crash to secure jackpots.	95-97%
Coin Flip	Two-player head-to-head; each wagers a skin and a coin is turned.	98-99% (minus home edge)
Match Betting	Predict the result of professional CS2 matches or particular maps.	90-95% (varies by odds)
Jackpot/ Case Opening	Players buy a virtual case; a random skin is awarded, sometimes worth more than the entry cost.	90-94%

The core idea is the exact same as conventional online gambling establishments, however the "cash" being wagered is a **digital collectible** that has a real-world market price on Steam and third-party exchanges. This produces a distinct blend of **gaming, speculation, and gambling**, which has actually drawn in both casual players and high-roller skin traders.
