What is CS Roulette?

At its core, CS Roulette is a digital wagering game influenced by conventional casino roulette, however with a distinct twist: instead of wagering fiat currency like dollars or euros, participants utilize *Counter-Strike* weapon skins, knives, and gloves as collateral.

Third-party gaming websites host these games. Players transfer their skins into the platform's bot inventory in exchange for website [CS2 Skin Roulette](#) credits (typically pegged to real-world value, such as GBP or coins). These credits are then utilized to put wagers on a spinning wheel divided into colored sectors-- generally red, black, and green.

How a Standard Round Works:

1. **Deposit:** The gamer deposits CS skins into the platform.
2. **Wager:** Players put their bets on several colors before the timer runs out.
3. **The Spin:** The digital wheel spins and lands on a specific color.
4. **Payout:** If the gamer's chosen color matches the winning section, their bet is increased based upon predefined chances. If they lose, the website keeps the credits.

Understanding the Wheel: Colors, Odds, and Payouts

To the untrained eye, CS Roulette looks like a game of pure opportunity. While luck is certainly the main element, understanding the mathematical circulation of the wheel is essential for anybody engaging with these platforms.

Most basic CS Roulette wheels feature 15 sections, numbered 0 through 14.

Color	Segment	Number of Segments	Payment Ratio	Approximate Probability
Red	7 (e.g., 1-- 7)	2x	46.67%	
Black	7 (e.g., 8-- 14)	2x	46.67%	
Green	1 (e.g., 0)	14x	6.66%	

Why Green is your house Edge

The green sector (usually represented by the number absolutely no) is where the platform protects its mathematical advantage-- commonly called the **home edge**. Without this green sector, a red/black bet would be a totally reasonable 50/50 proposition. By introducing a 14x payout on a 1-in-15 possibility, the platform ensures that over the long term, your house always wins.
