Trustworthy CS2 roulette sites carry out a **Provably Fair** algorithm. This cryptographic system allows gamers to separately verify the fairness of every single spin. Here is how it normally works:

- **Server Seed:** The website generates a random string of numbers and secures it (hashes it) before the spin, showing it to the gamer.
- **Customer Seed:** The player's browser creates a random string.
- **Nonce:** A number that increments with every bet positioned.
- **The Result:** Once the spin concludes, the unencrypted server seed is revealed. Gamers can plug the server seed, customer seed, and nonce into an independent verifier to show that the result was predetermined and untampered with.
