What Makes a Skin "Rare"?

A skin's rarity is figured out by a combination of elements:

2. **Float Value**-- The float coefficient (0 to 1) measures how close a weapon's wear is to factory-new. Lower floats (e.g., 0.007-- 0.07) are rarer and more valuable.
3. **StatTrak™ & Souvenir**-- StatTrak™ tracks kill counts, while Souvenir versions are connected to significant tournament maps. Both include originality and increase cost.
4. **Minimal Availability**-- Skins released during unique occasions, promo durations, or as benefits for winning competitive matches typically have limited supply.
5. **Pattern/Seed**-- Certain "Blue Gems" or uncommon pattern indexes can command astronomically high rates due to their visual distinctiveness.

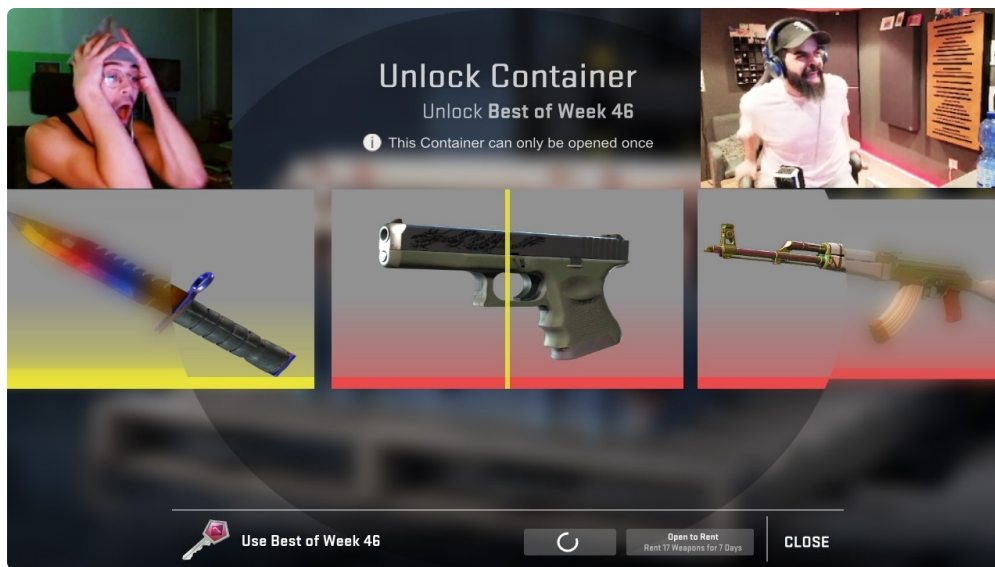

Understanding these components helps collectors gauge the real worth of a rare skin.
