Each slot is designated a specific multiplier, which figures out the gamer's payment.

 - **High Risk:** The multiplier at the edges can be massive (in some cases reaching 1000x), however most of the center slots will lead to a loss.
- 2. Variety of Rows:** This determines the size of the pyramid. A board with 8 rows provides a different mathematical spread than one with 16 rows. Increasing the variety of rows normally increases the optimal prospective multiplier.

3. **The "Big Fish" Hunt:** Players set the game to "High Risk" and "16 Rows," intending specifically for the 1000x multiplier. This technique requires a large bankroll, as many balls will land in losing slots before a substantial win occurs.
