The idea is easy:

2. **The opening stage:** The system opens the picked cases concurrently for all individuals in a live, visually synchronized match.
3. **The face-off:** Each gamer gets the specific weapon skins pulled from their designated cases during the rounds.
4. **The winner:** At the end of all rounds, the overall financial worth of the skins each player pulled is determined. The gamer with the greatest overall value wins the entire batch of skins from all individuals.

(Note: Depending on the particular video game mode chosen, sometimes "loser takes all" or "free-for-all" payout structures apply, but the highest worth generally secures the primary pot).
