Roulette CS2 is a digital gambling mini-game provided by a handful of third-party platforms that accept CS2 skins (or "tokens" stemmed from them) as stakes. 2. **Deposit Skins**-- Using Steam's trade-offer system, the gamer sends out several skins to the site's bot. The bot immediately produces a "ticket" that represents each skin's market price.
3. **Choose a Bet Type**-- Most platforms mirror the classic roulette wagering alternatives:

- **Inside bets** (single number, split, street, corner, six-line)-- high payment, low probability.
- **Outdoors bets** (red/black, odd/even, high/low, dozens, columns)-- lower payout, higher possibility.

4. **Set the Stake**-- The player decides how many "tokens" (each token = the financial value of a single deposited skin) to bet on each chosen outcome.
5. **Spin the Wheel**-- The site produces a *server seed* and shares its hash with the gamer; the player then supplies a *customer seed*. The combined seeds produce a random number that determines the winning slot.
6. **Outcome & Settlement**-- The winning number is displayed, payouts are calculated instantly, and jackpots are credited as new skin-tokens prepared for withdrawal or further play. Provably-Fair Verification(In a Nutshell)Step
