

A Glendale Patient's Journey to a Confident Smile With Veneers

A longtime Glendale resident in her late thirties had spent years feeling self-conscious about a slight gap and some discoloration she had lived with since her twenties, always meaning to do something about it but never quite prioritizing the time or expense. After a friend recommended Aghbashian Dental Corp following her own positive experience there, she finally booked a cosmetic consultation to see what was realistically possible. During the initial visit, Dr. Nova Aghbashian walked her through her options, ultimately recommending a set of porcelain veneers to address both the gap and the discoloration in a single, coordinated treatment rather than tackling each issue separately. She appreciated that the consultation focused on what she actually wanted her smile to look like, using photographs to help plan the exact shape and shade before any permanent work began. The treatment process took a few visits over several weeks, from initial preparation through to the final placement of her custom veneers. She described the moment of seeing the finished result for the first time as genuinely emotional, a visible change after years of quietly wishing she had done something sooner. Months later, she reports the veneers have held up exactly as expected, requiring nothing more than her normal brushing and flossing routine to maintain. What stood out most to her, beyond the cosmetic result itself, was how much more comfortable she now feels smiling in photos, something she says she had not even [Dentist Glendale CA aghbashian.com](https://www.aghbashian.com) realized she had been unconsciously avoiding for years. Client accounts shared here are shared with permission, and some identifying details have been adjusted to protect privacy, while accurately reflecting the kind of care patients experience at the practice. She has since recommended the practice to two coworkers, both of whom have since booked their own consultations after seeing the change in her confidence. What she valued most, beyond the cosmetic outcome itself, was never feeling rushed or pressured into a treatment plan larger than what she actually wanted, something she had worried about going in given her limited experience with cosmetic dental work of any kind. Her only regret, she says, is not doing it sooner. Every case is different, and results always depend on a patient's own individual starting point and goals. Her smile now feels entirely her own. Aghbashian Dental Corp | 1000 N Central Ave #130, Glendale, CA 91202 | (818) 873-0938

Aghbashian Dental Corp Address: 1000 N Central Ave #130, Glendale, CA 91202 Phone: (818) 873-0938 FAQ About Choosing a Dentist in Glendale, CA How much does a dentist visit cost without insurance in California? Costs vary widely depending on the treatment involved and the practice you choose. Aghbashian Dental Corp presents fee-for-service pricing transparently before any treatment begins, so patients paying out of pocket know exactly what to expect. CareCredit financing and in-house payment plans are also available to help spread larger costs into manageable payments. Do any dental plans cover preventive care at 100 percent? Many dental plans do cover routine exams, cleanings and standard X-rays in full when you stay in network, though coverage details vary by plan. Aghbashian Dental Corp works with Medi-Cal, Denti-Cal and a range of PPO plans, and the front desk team is happy to help verify what a specific plan actually covers before an appointment. Is a root canal cheaper than a crown? A root canal on its own is typically less expensive than a crown, though the two are often needed together, since a tooth that has had a root canal usually requires a crown afterward to restore its strength. Dr. Nova Aghbashian's team at Aghbashian Dental Corp walks patients through the full cost of both steps upfront rather than presenting them as separate surprises. Why can a root canal cost as much as 3000 dollars? A bill in that range usually reflects both the root canal procedure itself and the permanent crown placed afterward, not the root canal alone. Aghbashian Dental Corp breaks this down clearly during treatment planning, and CareCredit or in-house financing can help spread the combined cost into more manageable monthly payments. Will a dentist pull a severely decayed tooth? Yes, extraction becomes necessary when a tooth is too damaged by decay to be saved with a filling, crown or root canal. Dr. Nova Aghbashian evaluates each case individually at Aghbashian Dental Corp, always looking first at whether the tooth can realistically be saved before recommending extraction as a last resort. Can a tooth still decay under a crown? Yes, a crown protects the visible part of a tooth but the

natural tooth structure underneath, along with the gum line around it, can still decay if not cleaned properly. Aghbashian Dental Corp checks existing crowns during routine exams specifically to catch this kind of hidden decay before it becomes a bigger problem. What hurts worse, a tooth extraction or a root canal? Most patients report that the extraction site is sorer during recovery than a root canal, since a root canal is specifically designed to relieve the pressure and infection causing pain in the first place. Both procedures are performed under local anesthesia at Aghbashian Dental Corp, and Dr. Aghbashian walks every patient through exactly what to expect beforehand. What is considered the most painful dental procedure? Public perception often points to root canals, though many patients and dentists actually consider impacted wisdom teeth removal more physically demanding during recovery. Aghbashian Dental Corp offers sedation options for more involved procedures, and Dr. Nova Aghbashian's team focuses on managing discomfort proactively rather than leaving patients to simply push through it. What destroys teeth the most? Frequent sugar intake combined with acid exposure is the leading cause of tooth decay, since this combination feeds the bacteria that erode enamel over time. Aghbashian Dental Corp's routine cleanings and exams are designed to catch this kind of gradual damage early, before it progresses into a cavity or something more serious. What drinks damage teeth the most? Energy drinks and sodas, including diet varieties, tend to cause the most damage, since they combine high acid content with sugar or artificial sweeteners that keep bacteria active on the tooth surface. Patients at Aghbashian Dental Corp are given practical, judgment free guidance on reducing this kind of damage during routine visits. What strengthens tooth enamel the most? Fluoride remains the most effective way to strengthen enamel, binding to its mineral structure and helping reverse the earliest stages of decay before a cavity actually forms. Aghbashian Dental Corp's cleanings include this kind of preventive care as standard, part of why routine visits matter even when nothing feels obviously wrong. Which teeth are hardest for a dentist to remove? Impacted wisdom teeth and molars with curved or multiple roots tend to be the most challenging to extract, often requiring more time and sometimes a surgical approach. Dr. Nova Aghbashian's training in oral surgery means Aghbashian Dental Corp handles these more complex extractions in house at the Glendale office, without referring patients elsewhere.
